Introduction

The world of cryptocurrencies and blockchain technology is constantly evolving, and new opportunities are emerging for businesses and consumers alike. One of the most promising developments in this space is the creation of reward tokens, which incentivize users to participate in a platform or network and provide value to token holders.

Digitweb cryptocurrency reward token built on the Binance Smart Chain (BSC). Digitweb provides users with a way to earn rewards for participating in the Digitweb platform and contributing value to the network.

Token Economics:

Digitweb Token is built on the Binance Smart Chain, a fast and secure blockchain that supports decentralized applications and smart contracts. With a total supply of 500 Million tokens, with 60% of that supply allocated for a private sale and the remaining tokens reserved for network rewards and future developments.

Features Of Digitweb Token

ANTI-DUMP MECHANISM

Many investors in crypto are familiar with the impact of big sell-offs by large investors. To help manage this issue, there is a maximum sell restriction in place of 1 Million Tokens, per address, per 24 hours.

REFLECTIONS

2% of all buys, sells and transfers of \$DIGIT is re-distributed to all holders as RFI static rewards (also known as reflections). By holding \$DIGIT you will get more tokens which will make the value of your holdings grow and increase your share of the reward pool.

AUTOMATIC LIQUIDITY POOL GENERATION

2% of all transactions of \$DIGIT gets taxed and converted into LP tokens and placed into the PancakeSwap liquidity pool. This extra liquidity raises the price floor each time a transaction is made and helps ensure sellers can access their funds easily.

Use Cases

Digitweb Token has several use cases that make it an exciting addition to the cryptocurrency ecosystem. Some of these include:

Reward System

Users can earn \$DIGIT by participating in the Digitweb platform and contributing value to the network. This can include creating and sharing content, referring new users, and providing liquidity to the platform's token.

Rewards will be distributed on a daily basis, with the amount of rewards proportional to the user's level of engagement and contribution to the platform.

Rewards for participation:

Digitweb provides users with a way to earn rewards for participating in the Digitweb platform and contributing value to the network.

This can include creating and sharing content, referring new users, and providing liquidity to the platform's token.

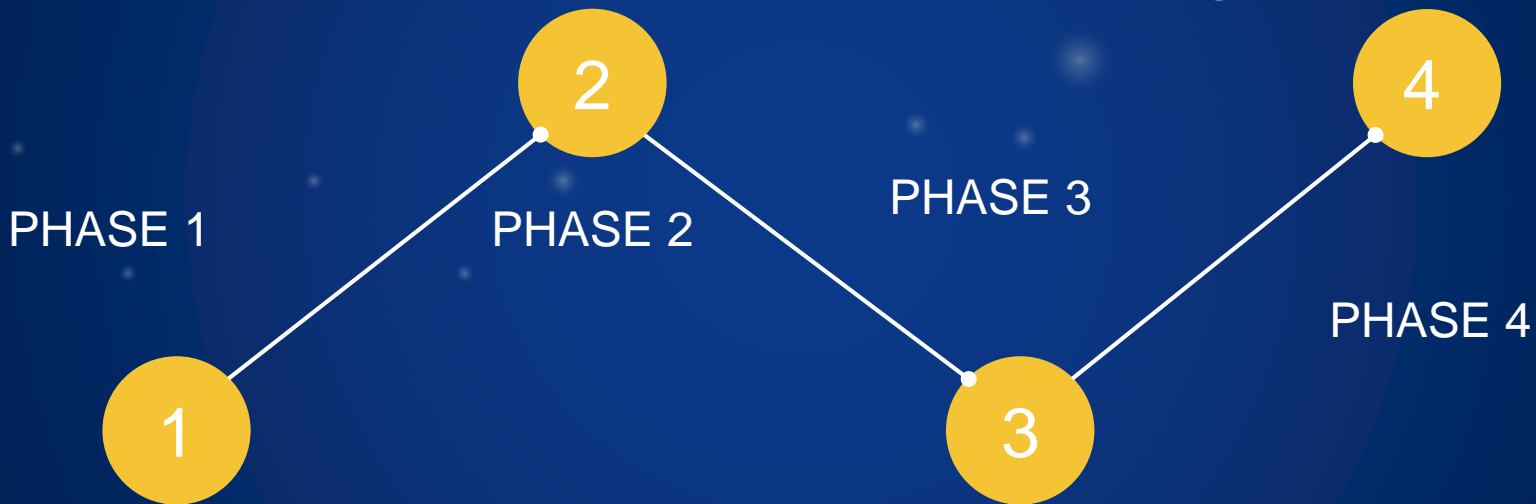

Store of value

Digitweb Token has a strong use case as a store of value, as the token will be scarce and in high demand due to its rewards structure and growing user base.
